Lalit Rajpurohit

Cloud & DevOps Engineer | Spring Boot Developer | AI Integration Specialist

+91-7420074104 rajpurohitlalit181@gmail.com linkedin.com/in/lalit-rajpurohit lalit-rajpurohit.github.io

Summary

- **Cloud & DevOps:** Certified **AWS Solutions Architect (SAA-C03)** and **Azure Administrator (AZ-104)** with expertise in cloud-native architectures, serverless applications, and containerized deployments.
- **Infrastructure & Automation:** Skilled in **Terraform**, **Docker**, **Kubernetes**, and **CI/CD pipelines (GitHub Actions)** for reproducible and cost-optimized deployments.
- **Full Stack Development:** Proficient in **React, Next.js, Node.js, TypeScript** for frontend and **Java, Spring Boot** for backend REST APIs and scalable systems.
- **Software Engineering:** Strong understanding of **SDLC**, **agile methodologies**, and best practices in building end-to-end software solutions.
- **AI & Automation:** Experienced in integrating **LLM APIs (OpenAI, Claude)**, building **AI agents** with n8n and LangChain, and leveraging **AI coding tools** (GitHub Copilot, Claude Code) for enhanced development productivity.

Experience

AWS Cloud & DevOps Intern **May 2026 – Present**

Emplay Inc *Technologies: AWS, Linux, Docker, Git*

- Provision and manage AWS infrastructure using EC2, EBS, IAM, VPC, and security groups for production-oriented environments.
- Administer Linux-based AWS servers: instance setup, package management, storage configuration, permissions, and system hardening.
- Deployed Docker and containerized workloads on EC2, relocating container data to dedicated EBS volumes with symlink-based persistent storage.
- Troubleshoot infrastructure and connectivity issues across security groups, port access, storage, and server-level configuration.
- Contribute to EGCP, the internal Emplay platform, delivering CVE alert mailing functionality and audit report features.
- Use Git-based workflows for application deployment, and author technical documentation, implementation notes, and knowledge-transfer sessions.

Web Development & Cloud Intern **December 2025 – March 2026**

Jetro Solutions (Remote) *Technologies: React, Node.js, JavaScript, AWS*

- Designed and developed a responsive company website using modern web technologies.
- Deployed the website to a live production environment, ensuring availability and performance.
- Worked on end to end development life-cycle including design, implementation, testing, and deployment.
- Collaborated with team members to understand requirements and deliver functional web solutions.
- Gained hands on experience in website hosting, deployment workflows, and basic server management
- Built and deployed the production website *vilo-store.com* as part of the internship project.

Awards & Certifications

- **AWS Certified Solutions Architect – Associate (SAA-C03):** Demonstrated expertise in designing scalable, secure, and cost optimized cloud architectures using AWS services such as VPC, EC2, ALB, RDS, IAM, and high availability patterns. *Credential verification link*.
- **Microsoft Certified: Azure Administrator (AZ-104):** Validated skills in managing Azure subscriptions, virtual machines, networking, storage, identity, monitoring, and maintaining secure cloud infrastructure. *Credential verification link*.

Education

- **Bachelor of Business Administration in Computer Applications** CGPA: 9.0 (2022 – 2025)
  Savitribai Phule Pune University
- **CloudThat CTJGP Program** – Cloud & DevOps Training (2025 – Present)
  www.cloudthat.com

Projects

- **AI Tools Discovery Agent** *github.com*
  - Built a local-first automation tool using n8n, Docker, and OpenRouter/OpenAI to discover new AI tools on GitHub.
  - Summarizes repositories with LLM, stores results locally, and sends automated daily email digests.
- **AI Architect – System Design Generator** *github.com*
  - Built an AI-powered platform that transforms application requirements into complete system architecture designs.
  - Automatically generates cloud infrastructure diagrams, microservices components, and recommended tech stacks for scalable applications.
- **CloudCost - AWS Cost Monitoring Tool** *github.com*
  - Built a Spring Boot application to monitor AWS cloud expenses using the Cost Explorer API.
  - Implemented automated daily cost retrieval, budget alerts via email, and REST APIs with React dashboard for visualization.
- **Live Internship Project – Vilo Store** *vilo-store.com*
  - Developed and deployed an e-commerce platform for grocery delivery in small cities.
  - Implemented backend APIs and cloud deployment for scalable product management and order processing.
- **AWS 3-Tier Architecture** *github.com*
  - Implemented a highly available 3-tier architecture using AWS EC2, ALB, Auto Scaling, and RDS.
  - Configured VPC networking, security groups, and load balancing to simulate production cloud infrastructure.
- **End-to-End Encrypted Chat Application (Spring Boot + React)** *github.com*
  - Built a real-time chat application with WebSocket communication and end-to-end encryption.
  - Implemented AES-based encryption and secure messaging architecture to protect user data.
- **Banking System (Spring Boot + React)** *github.com*
  - Developed a full-stack banking system supporting account creation, deposits, withdrawals, and money transfers.
  - Implemented secure REST APIs with Spring Boot, transaction management using @Transactional, and SQLite database integration.
- **Serverless Contact Form (AWS Lambda)** *github.com*
  - Created a serverless contact form using AWS Lambda, API Gateway, and SES for email notifications.
  - Enabled scalable backend processing without server management using AWS serverless architecture.
- **Containerized Web Application (ECS Fargate)** *github.com*
  - Deployed a containerized web application using Docker and AWS ECS Fargate.
  - Configured Application Load Balancer and Auto Scaling for scalable container orchestration.
- **Movie Booking Website (Django)** *github.com*
  - Developed a movie ticket booking platform using Django with features like movie listings, seat selection, and ticket reservations.
  - Implemented backend logic for booking management, user authentication, and database integration using Django ORM.
- **Static Website Hosting (AWS Amplify)** *github.com*
  - Hosted a static website using AWS Amplify integrated with Route 53 domain management.
  - Configured CI/CD pipeline for automated deployment and global content delivery.

Technical Skills

- **Cloud & Infrastructure:** AWS, Azure, GCP, IaaS, PaaS, SaaS, Hybrid Cloud, VPC, IAM
- **IaC & Automation:** Terraform, CloudFormation (Basic), Ansible, GitOps
- **Containers & Orchestration:** Docker, Kubernetes (EKS, AKS, GKE), Amazon ECS/Fargate, Helm
- **CI/CD & Tooling:** Git, GitHub Actions, Jenkins, Pipeline Automation
- **Monitoring & Security:** Amazon CloudWatch, Prometheus, Grafana, ELK Stack (Basic), DevSecOps
- **Programming & Backend Development:** Java, Python, C++, JavaScript, TypeScript, Spring Boot, REST APIs, Node.js
- **Frontend Technologies:** React, Next.js, HTML, CSS, Tailwind CSS
- **Databases & Scripting:** MySQL, SQLite, Shell Scripting
- **AI & Automation:** OpenAI API, Claude API, n8n, OpenClaw, LangChain, GitHub Copilot, Prompt Engineering, AI Agents, Workflow Automation
